

BEGA LIMBURG BOOM

LED-Information

What you should know about our LED technology

LEDs have today replaced other lamps in many areas.

This trend will continue in the future and yield many benefits for us. LEDs presently have a very long service life – we estimate this to be over 50 000 hours.

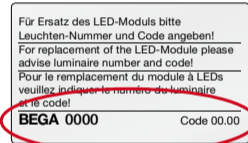

After this, our LEDs will not fail but still remain operational with a luminous flux (Φ) of at least 70 %.

When a LED lamp comes to the end of its service life, you can order a new LED for your luminaires. When ordering replacements, please state the article number and production code. Both are given on the anodized label in the luminaire.

LEDs are high-quality electronic components!

Please avoid touching them directly during installation or relamping.
